Puget LNG joins The Society for Gas as a Marine Fuel

BELLEVUE, Wash. (XX,XX, XXXX) – Puget LNG recently joined The Society for Gas as a Marine Fuel (SGMF) as its 150th worldwide member.

Puget LNG is already moving ahead to help create a better energy future with the construction of the Tacoma LNG Facility, which is expected to be operational in 2021. Once completed the facility will deliver the cleanest fuel choice possible today for shipping in the Puget Sound region, all while reducing greenhouse gas emissions.

“The knowledge and experience that is provided by the SGMF will be of great value to us as we prepare to fuel our first ship in 2021,” said Jonathan Harris, the Senior Business Development Manager at Puget LNG. “We look forward to sharing our expertise and implementation of industry best practices and standards through our participation in this organization.”

Puget LNG is positioned to be a key supplier of liquefied natural gas (LNG) in the Pacific Northwest with its facility located in the Port of Tacoma. The facility will provide a cleaner fuel alternative to vessels with TOTE Maritime Alaska. Puget LNG is focused on providing customers with a safe, reliable and economic source of LNG for shipping and transportation. The plant’s Port of Tacoma location serves as an efficient location for LNG-fueled ships.

The facility will have a shared function, providing LNG for Puget LNG’s commercial transportation customers and also providing necessary domestic supply back up for Puget Sound Energy’s natural gas customers (residential, commercial and industrial).

About Puget LNG

Puget LNG is a wholly owned subsidiary of Puget Energy, the parent company of Puget Sound Energy. The company was created by Puget Energy to market and sell liquefied natural gas (LNG) as a marine and land-based transportation fuel from its Port of Tacoma facility (operational early 2021).
